

## Hazgreen Limited - Carbon Footprint Reduction Policy

Hazgreen recognises its social responsibilities to its customers, suppliers, employees and the public in general and strives to conduct its business activities in a manner which causes the least possible impact on the environment.

To this end, Hazgreen is committed to contribute, wherever possible, to the reduction of carbon emissions, however the company recognises that it operates within an industry sector that contributes more highly than most to carbon emissions.

Hazgreen has therefore introduced the following procedures and standards:

- Hazgreen has calculated the company's carbon footprint and has offset the emissions by matching each vehicular journey with a tree planted as an Associate Member of International Tree Foundation.
- Introduced mandatory training in best practice driving skills to reduce fuel consumption and emissions.
- Hazgreen will aim to reduce its carbon footprint by 5% year on year.
- Hazgreen will strive to maintain its environmental awareness.
- All Hazgreen drivers are ADR trained.
- Hazgreen will encourage the use of environmentally responsible organisations when making purchasing decisions.
- Hazgreen will maintain awareness of improved practices and guidelines on the reduction of carbon emissions.

Signed:

A handwritten signature in black ink, appearing to read "Marc Todd", is written over a large, stylized, horizontal flourish that extends across the width of the signature area.
